

How to Felt a Corner Shed

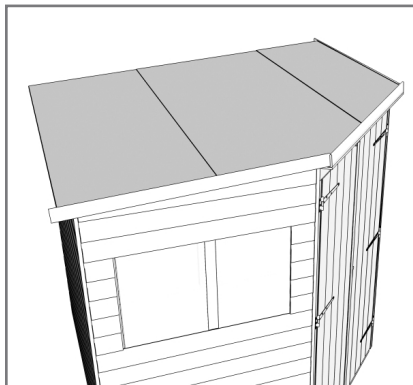

Roll out the felt and cut to size. Attach the first piece of felt across the roof from the point above the window to the lowest point on the roof and secure tightly with the clout nails provided. **(Image A)** Then roll over the next piece making sure that there is enough overlap to prevent any leaks. **(Image B)**

Roll the last piece over the roof and secure with clout nails. **(Image C)**. Then pull the edge of the felt tightly over the roof and nail in place. Secure all the way around the roof.

Once you have attached the felt, you can trim off any excess and then attach the barge boards as per the instructions. This will hide any untidy edges.

Please note you will only be supplied with 3 bargeboards for the Corner Buildings. These are to be positioned above the door and window sections.
