

How to Felt a Pent Roof

Roll out the felt and cut to size. Attach the first piece of felt to the low side of the roof and secure tightly with the clout nails provided. **(See Image A)** Then roll over the next piece making sure that there is enough overlap to prevent any leaks. **(Image B)** Secure tightly all the way around the roof. Make sure not to cut the felt with too much overhang or you will not have enough to fit over the roof.

Once the felt is secure, you can cut off any excess and attach the barge boards which will hide any untidy edges. Please note only 3 bargeboards will be supplied with pent style sheds. There is no bargeboard for the lower edge to allow water to run off the roof.
